Purpose of this guide

CONFIDENTIAL - for internal team use only

This document shows staff how to build each round's OFG Progress Report in the pipeline. Every round is a before -> after snapshot of the client's credit file. The wizard chains those snapshots so Round N's After becomes Round N+1's Before - the round-to-round story Cesar wants, not enrollment vs latest every time.

The chain

Round 1 Before = enrollment credit report (day they started)
Round 1 After = report after Round 1 work
Round 2 Before = Round 1 After <- auto-filled for you
Round 2 After = report after Round 2 work
...and so on through Round 5.

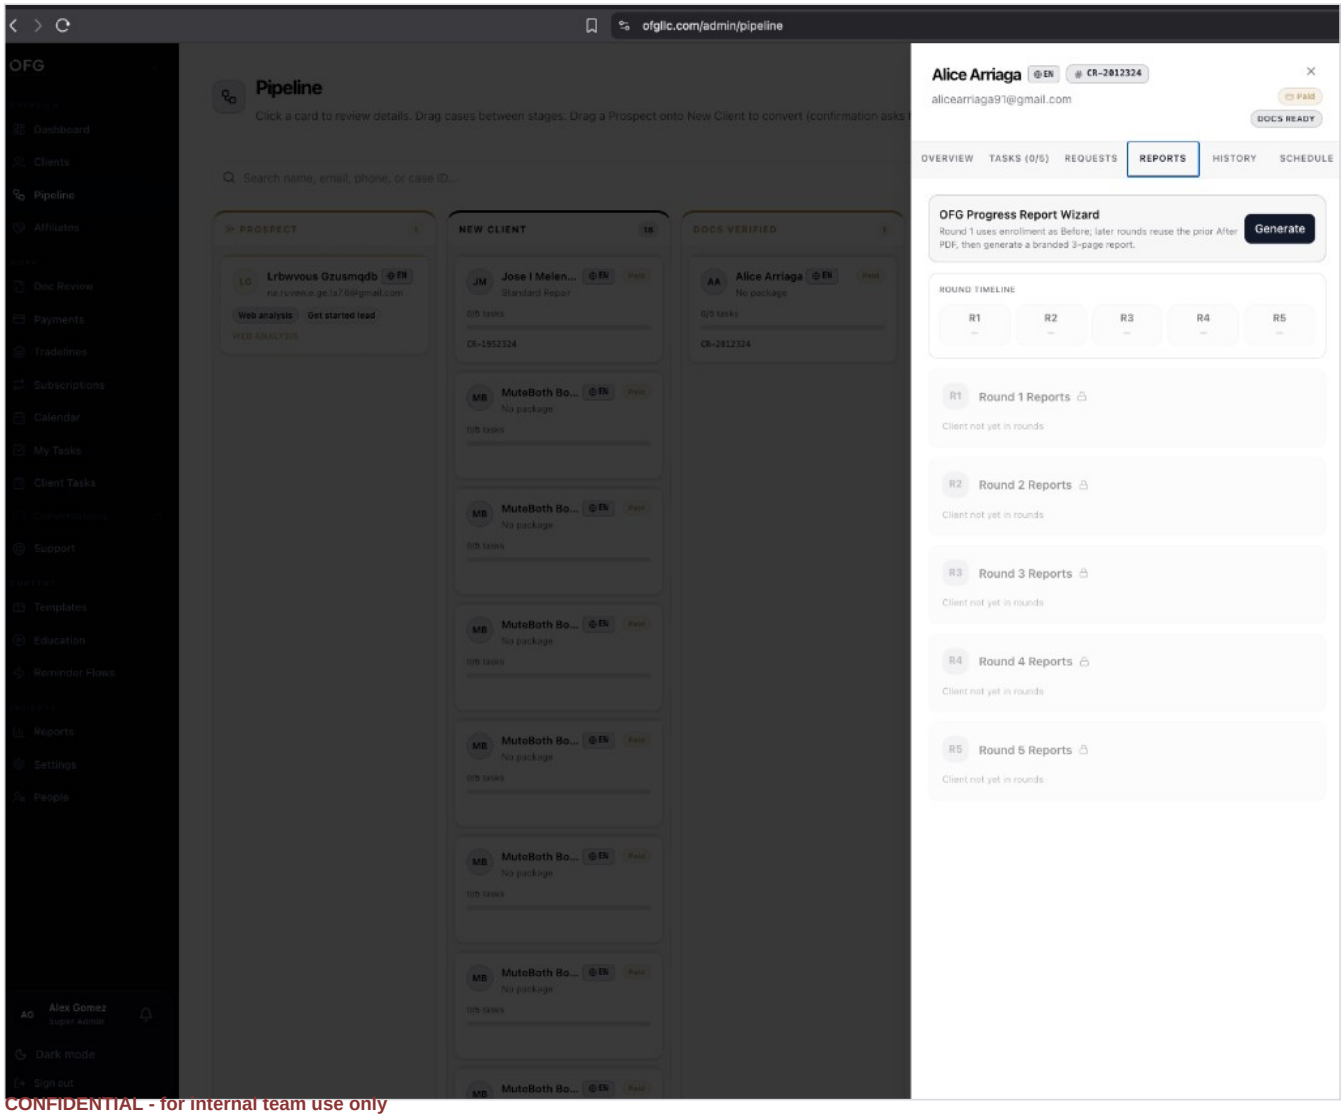

The wizard chains the story so each round's After becomes the next round's Before. You only re-upload Before if something is wrong.

Where to open it

1. Pipeline -> open the client panel
2. Reports tab
3. Tap Generate (OFG Progress Report Wizard)

You can generate once the case is in Docs Ready or any Round stage.

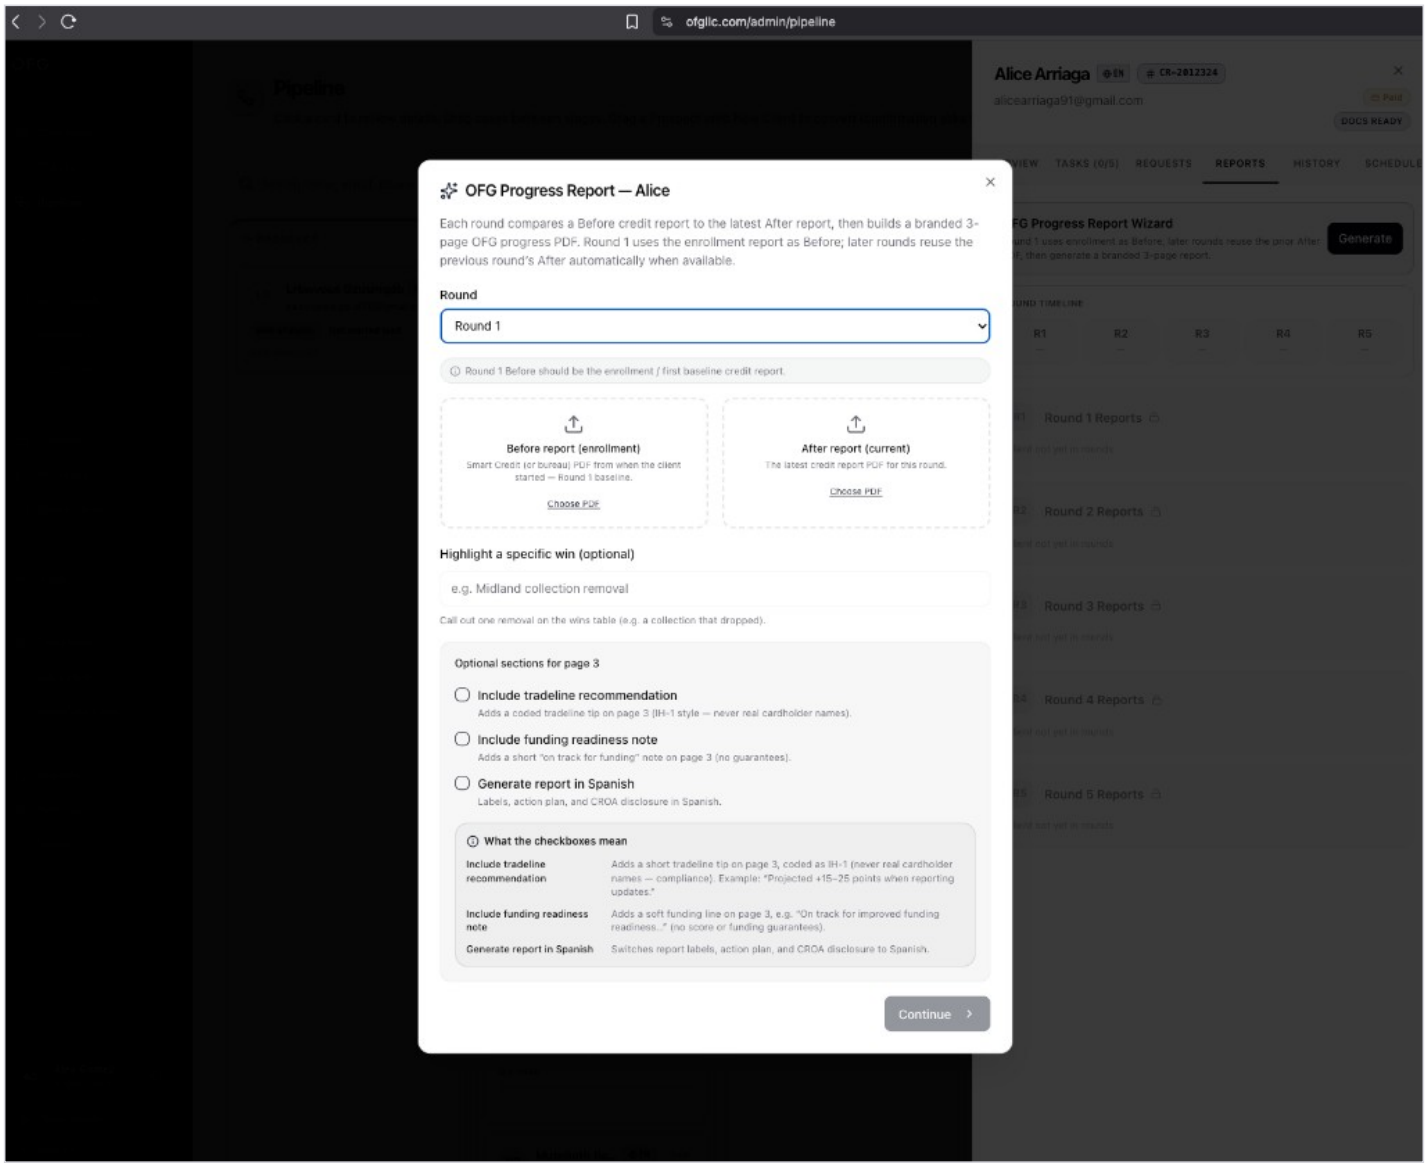

Reports tab

ROUND 1

- Upload Before = enrollment / first baseline PDF (SmartCredit, etc.)
- Upload After = latest report for this round
- Review scores, wins, targets, bureau tags (TU / EX / EQ)
- Fix dates if the PDF date looks wrong
- Preview -> Publish
- Client sees the report in their portal; pipeline advances

Wizard - Round 1 (both PDFs)

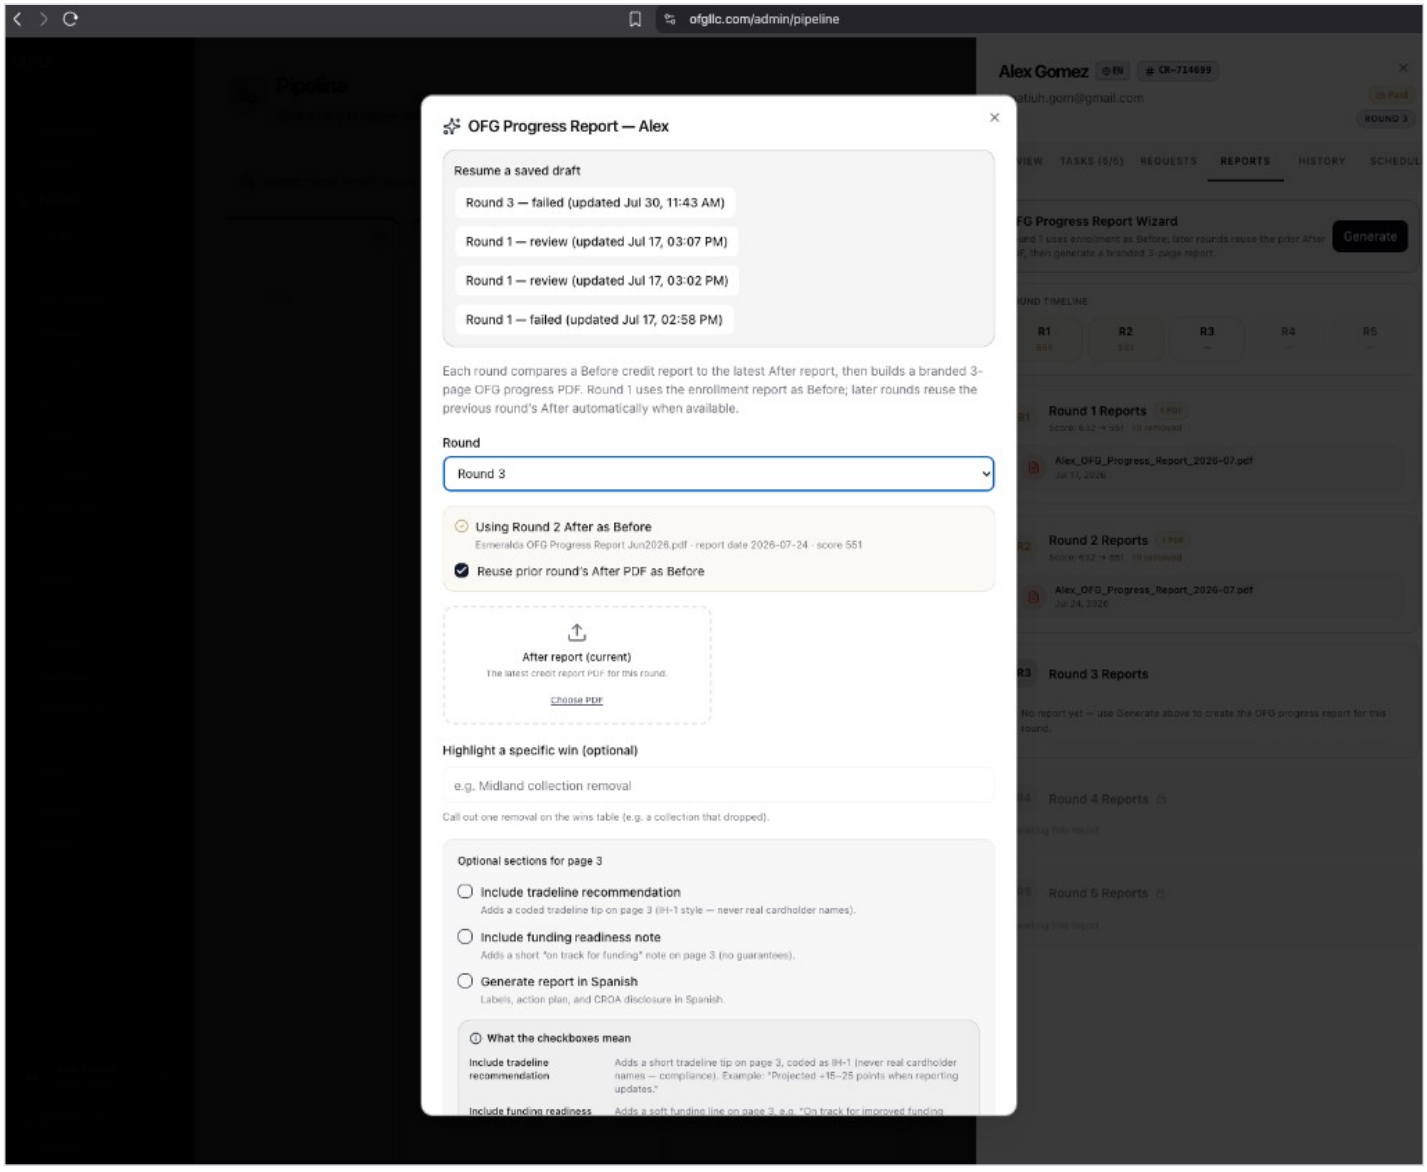

ROUNDS 2-5

- Wizard offers: "Using Round N-1 After as Before" - leave that ON
- Upload only the new After PDF
- Override Before only if you must replace the prior file
- If there is no published prior round: upload both Before and After
- Review -> Preview -> Publish

The timeline strip on Reports shows each round's score and report date so you can see the chain at a glance.

Wizard - reuse prior After as Before

Golden rules

[OK] Always publish Round N before starting Round N+1
(reuse needs a published prior After).
[OK] Compare the review screen against the source PDFs
(open Before / After with the buttons). Fix low-confidence scores.
[OK] Wins = items that disappeared. Targets = still on the report.
Tap TU / EX / EQ badges to correct which bureau(s) apply.
[OK] Report dates come from the PDF when possible; edit if needed.
They print on page 1 of the branded PDF.
[OK] Check the CROA attestation before publish. Large score drops
need an extra acknowledgment (usually a mis-read - fix first).

[NO] Don't upload enrollment as Before for every round - that breaks
the round-to-round story Cesar wants.
[NO] Don't publish if Before and After look swapped
(After date earlier, or scores collapsed for no reason).

Quick flow (30 seconds)

Open client -> Reports -> Generate
-> pick round
-> Round 1: two PDFs | Round 2+: reuse prior + one new After
-> Continue -> Run extraction
-> sanity-check scores / wins / dates
-> Preview -> Publish

If something looks off

- Wrong Before? Uncheck reuse and upload a different Before PDF.
- Bad extract? Re-extract, or Start over and try again.
- Resume a draft from the list at the top of the wizard.
- Affiliates cannot run this - staff only.

Bottom line

One enrollment baseline, then each round's After feeds the next.
The wizard does the chaining; you verify and publish.
